EXPERIENCE

Technical Architect

Coforge

09/2022 - Present (3 years, 4+ months) Bengaluru, India

- Owned end-to-end architecture and delivery of a **Spark**-based reconciliation platform to identify missing financial holdings, supporting downstream reporting accuracy and client audits.
- Designed and implemented an event-driven orchestration model using **Kafka**-triggered **AWS Lambda** functions to control **Airflow** workflows, achieving 100% SLA adherence for time-critical data deliveries.
- Architected incremental data processing using **DBT** with attribute level change detection across millions of records, enabling accurate customer state tracking while minimizing reprocessing costs.
- Defined conditional data delivery patterns using lookup-driven controls in **DBT** to prevent duplicate processing and reduce unnecessary downstream compute consumption.
- Built and standardized deployment automation for **Spark** workloads on **Cloudera Data Platform** using **shell**-based tooling, ensuring repeatable and low-risk production releases.
- Established platform-level engineering **standards** for code quality, testing, and reviews, improving team delivery consistency and reducing production defects.

Data Engineer

Accenture

09/2019 - 09/2022 (3 years) Hyderabad, India

- Predicted the tap times of furnaces a day before actual cast using **PySpark** which allowed customers to be 90% sure of their delivery time.
- Developed low latency **REST APIs** using **PySpark**, which resulted in good customer satisfaction and accurate results.
- Developed lightweight micro and daily batches in **PySpark** which handles data up to TBs to keep the data fresh 99% of time in Data Lake.
- Resolved a major security loophole by aliasing passwords for functional ids leveraging **Hadoop** credentials.
- Developed backend of a digital-twin of the steel plant by replicating each equipment in it digitally and populating its status on screen in real-time for users to monitor the plant from remote.

Data Engineer

TCS

09/2011 - 09/2019 (8 years) Guadalajara, Mexico | Kolkata, India

- Developed, enhanced and maintained multiple batch pipelines using **Spark**, **Scala** and **Hive**.
- Used **Sqoop** to import data from **Teradata** into **HDFS**.
- Maintained health and compliance of 100+ jobs delivering data downstream each day.

EDUCATION

B.Tech

Computer Science & Engineering

College of Engineering & Technology

2007 - 2011 Bhubaneswar

SUMMARY

Data Platform Architect with 14+ years of experience designing and scaling large-scale batch and streaming data platforms across hybrid environments. Strong expertise in Spark-based lakehouse architectures, event-driven pipelines, SLA-driven data reliability and embedding light-weight intelligence to the platform through ML . Led multi-team delivery for manufacturing and finance use cases under strict SLA and cost constraints.

CERTIFICATION

AWS Cloud Practitioner

Fundamentals of AWS Cloud services and concepts

Snowflake SnowPro Core COF-C03

Snowflake Data & AI features overview

SKILLS

Programming Languages

Python, Scala, Shell Script

Data Platforms

Dbt, Spark, Kafka, Apache Iceberg, Hadoop, Hive, Snowflake

Architecture

Lakehouse Architecture, Streaming & Batch, Incremental & CDC Processing, Data Modeling, SLA-Driven Design, Event-Driven Pipelines

Orchestration & Monitoring

Airflow, AWS Lambda, AWS CloudWatch

Visualization

Grafana, Power BI, Flask

Cloud Providers

AWS (S3, Lambda, AWS CloudWatch

AI Tools & Services

Antigravity, Cursor

HOBBIES

Piano, Books, Stocks, Road Trips
